MISFUELLING

HAVE YOU PUT THE WRONG FUEL IN YOUR CAR?

STOP!

**DO NOT START
YOUR ENGINE**

(THIS WILL CIRCULATE THE FUEL!)

Petrol In A Diesel Engine

Generally a small amount of incorrect fuel should not damage the engine as long as you have not started the car and top up fully with diesel fuel. If you've added more than 10% (5 litres in a 50 litre tank) petrol - You will need to drain the tank and refill with diesel. (FOR HELP SEE BELOW). If you've added less than 10% petrol (5 litres in a 50 litre tank) Top up with diesel and run normally.

Diesel In A Petrol Engine

Theoretically it should be hard to fill a petrol tank with diesel, as diesel nozzles are too wide to fit into the tank. However using diesel in a petrol engine may destroy the engine's catalytic converter, necessitating a costly replacement. You will need to drain the tank.

YOU WILL NOT BE COVERED FOR MISFUELLING ON YOUR BREAKDOWN COVER

>> YOU WILL BE FORCED TO PAY FULL PRICE IF YOU CALL THEM PLUS GARAGE PRICES <<

There are companies who will come out to the petrol station and drain your car on the spot for you. They are cheaper and most accept a credit card payment.
